

Good Day!

Hello Everyone,

Well it seems I have fallen back on my new duty as communication gal already! These should come out every Monday.... I have now put a recurring reminder in my calendar, so barring a meltdown of my computer, I shall be in your inbox again on a regular Monday schedule.

I'm sure some of you are looking forward to the upcoming long weekend, and with that I have put a link here to a website that I personally enjoy called Instructables – if you are going to subscribe be aware that they send an email at least once a week, sometimes more. I am sure you can adjust this in your settings, although I do like seeing the funny and sometimes very useful ideas that they send through. They also have some contests where you write an instructable and if you win, its \$500-\$1000 in Amazon gift cards 😊

Please note, I know the word wood is spelled wrong in the link, I had nothing to do with that 😊 -- its just an egg turning video -

<https://www.instructables.com/Wodden-Easter-Egg/>

And sticking to the theme of Easter, I was wondering how and why egg painting became a thing, well thanks to Huffpost here is a link that explains the painted egg & Easter eggs in general. Please note I hope I am not offending anyone with this information, I'm Catholic, or at least a lapsed one, and I found the article interesting with stuff I really didn't know! And besides that, the slide show

of painted eggs at the bottom of the article is amazing, gave me some inspiration to paint!

Enjoy: https://www.huffpost.com/entry/easter-eggs-history-origin-symbolism-tradition_n_1392054

That's it for this week, please watch your email for the upcoming April 8 zoom meeting information, it is a demonstration of how to make and use an articulated hollowing system with Keith Mombourquette. Also, please check out the WGO website as of tomorrow Cam Burrows is our Turner of the Month for April. If you would like to be featured, please reach out to me.

Have a fantastic day – remember, keep smiling and making woodchips!

Colleen
